* Fine grained, fully killed alloy steel used in applications where high strength, low weight and high impact values are required.

* Quenched and tempered constructional alloy with high yield strength at 90 or 100 ksi minimum, width weldability and good toughness at low atmospheric temperatures.

* Offers the optimum in strength, toughness, corrosion resistance, impact-abrasion resistance, and long term economy.

* Used in components for earthmoving or transport equipment, booms, bucket parts for power shovels or cranes, penstocks, turbine scroll cases and unfired pressure vessels.

* Not recommended for service at temperatures lower than -50°F or higher than 800°F.

Note: The data contained in this document is accurate at time of printing, and intended for use as a general guide.

* Typical maximum values. Mill certifications are available upon request.

† Nucor restricts P & S to lower levels than required by ASTM A514 Grade B/H

A-514
High Yield Strength, Quenched & Tempered Alloy Steel Plate

WELDING
Suggested welding consumables for arc welding processes:

<table>
<thead>
<tr>
<th>Process</th>
<th>≤ 2 ½&quot;</th>
<th>&gt;2 ½&quot;</th>
</tr>
</thead>
<tbody>
<tr>
<td>Manual Shielded Metal-Arc Low Hydrogen</td>
<td>E11015-x, E11016-x, E11018-x</td>
<td>E11015-x, E11016-x, E11018-x</td>
</tr>
<tr>
<td>Submerged-Arc</td>
<td>F11xx-Exx-xx</td>
<td>F10xx-Exx-xx</td>
</tr>
<tr>
<td>Gas Metal-Arc</td>
<td>ER1105-x</td>
<td>ER1105-x</td>
</tr>
<tr>
<td>Flux Cored-Arc</td>
<td>E11xTx-x</td>
<td>E10xTx-x</td>
</tr>
</tbody>
</table>

Deposit weld metal shall have a minimum impact strength of 20 ft-lb at 0°F when Charpy V-Notch specimens are required.

Suggested minimum preheat & INTER-PASS temperatures for welding:

<table>
<thead>
<tr>
<th>Thickness</th>
<th>Temperature</th>
</tr>
</thead>
<tbody>
<tr>
<td>Up to ½&quot; incl.</td>
<td>100°F</td>
</tr>
<tr>
<td>Over ½&quot; to 1 ¼&quot; incl.</td>
<td>150°F</td>
</tr>
<tr>
<td>Over 1 ½&quot; to 2 ¾&quot; incl.</td>
<td>200°F</td>
</tr>
<tr>
<td>Over 2 ½&quot;</td>
<td>250°F</td>
</tr>
</tbody>
</table>

**Deposit weld metal shall have a minimum impact strength of 20 ft-lb at 0°F when Charpy V-Notch specimens are required.**

A preheat or inter-pass temperature above the minimum shown may be required for highly restrained welds – preheat or inter-pass temperatures should not exceed 400°F for thicknesses up to 1 ½” or 450°F for thicknesses over 1 ½”.

**WELDING**

**FORMING**

Cold, warm, and hot forming are processes that can be utilized. The mechanical properties of the particular steel grade being formed dictates the process required for forming. A minimum plate temperature of +60°F, grinding plate edges, conditioning and lubricating form dies, as well as the application of uniform bending force is suggested during forming. Due to the enhanced mechanical properties of this plate, the bending forces required to form the plate will be greater and more plate “springback” can be expected to occur. The plate should not be hot formed without causing degradation to the mechanical properties.

</table>

For wear applications in many industries:

* Aggregate
* Construction
* Forestry
* Mining
* Pulp & Paper
* Steel

PROCESSING CAPABILITIES

* Plasma Cutting
* Drilling
* Laser Cutting
* Oxy Fuel Cutting
* Forming
* Welding
